

Why an annual Vaccination?

"Why do I need to get a vaccine every year? I don't even get the flu shot every year, so I don't think I need the COVID vaccine either."

"Getting a vaccine every year increases immunity to the virus and is a great way to protect yourself and your loved ones this season. The flu and COVID continually mutate and generate variants. The vaccines try to target the most common variant to help protect you from getting infected."

"I understand that you don't get the flu shot, but getting either or both will make it more likely that you'll have a healthier winter since you'll be more likely to have protection against the current version of the virus."
