

Doctor doesn't recommend the vaccine

"My doctor told me not to get the Covid vaccine." OR "My doctor says I don't need the Covid vaccine."

"I definitely don't want to contradict your doctor, but there's new information out that your doctor may not have immediate access to, and I do. I'd be happy to share that information with you so you can be as up to date as possible to develop your own opinion. While your doctor has many different aspects of your healthcare to keep up with, medications and vaccines are my specialty. I am very knowledgeable about the medications you are on, and I don't have any concerns about negative interactions between your medications and the Covid vaccine. Based on your medications/medical history, I do recommend the vaccine for you so you can be as protected as possible."
